# INSTRUCTION MANUAL
# ONE-PIECE TELEPHONE - CAT # F6000

## LED INDICATOR
The red indicator located on the back of the telephone illuminates when the telephone is in use, or when the handset has not been properly replaced on-hook after a call.

## TONE/PULSE DIALING SWITCH (T/P)
To determine the correct position of this switch, first select the TONE position, then press button 1 on the dial pad.  If the dial tone disappears, your phone is ready for use.  However, if a dial tone remains, select the PULSE position.

## FLASH BUTTON (F)
Your new telephone has 100ms timed hookflash for compatibility with network services such as call waiting, call transfer & 3-way conferencing provided that you are an Easycall subscriber.  The FLASH button also provides call transfer when used in conjunction with PABX systems requiring 100mS hookflash.

## MEMORY STORE (S)
Your new telephone is able to store up to ten telephone numbers with a maximum of 20 digits in each number.
- lift handset and press S button
- key in phone number to be stored
- press S button again
- press memory location buttons 0 to 9.  The number is now stored with that memory location
- hang up the telephone

## MEMORY DIAL (M)
Numbers previously stored to memory can be dialled by pressing M button followed by one of the memory location numbers into which the number was stored.

## HOOKSWITCH
This button is used to hang up the telephone.  Placing the telephone face down onto a flat surface will activate this switch.

## RINGER ON/OFF SWITCH
Used to switch the telephone's ringer on or off.
